DocMatrix Feature Plan

Features to match DentSoft, and new features to make DocMatrix stand out.

Part 1: Must implement (match DentSoft)

Appointments

- Live queue (Scheduled, Arrived, Waiting, In Consultation, Completed)
- Booking based on real clinic hours and doctor availability
- Day, week and doctor-wise views, with filters
- Reschedule and cancel with a reason
- Walk-ins and automatic no-show marking
- Waiting room timer
- Missed enquiries list (half-finished online bookings)

Patient records

- Permanent patient ID, searchable by name, phone or ID
- Full profile, medical history and dental history
- Allergy warnings at the top of the file
- Visit-by-visit timeline
- Document uploads (X-rays, scans, photos, consent forms)
- Consent records and an assigned doctor

Clinical

- Digital prescriptions on the clinic letterhead
- Master lists (complaints, findings, diagnoses, medicines, advice)
- Structured clinical notes
- Pathology and X-ray orders
- Treatment plans tracked to completion

Billing

- Itemised PDF invoices and part payments

- UPI QR on the bill
- Pending dues list and daily collection (cash, card, UPI)
- Service price list with offer prices
- Payment history and expense tracking

WhatsApp automation

- Confirmation, 24-hour and 2-hour reminders
- Rescheduled and cancelled notices, welcome message
- Prescription and invoice PDFs, verification code
- On/off switch and a log of every message

Clinic website

- Self-updating site with online booking on real slots
- WhatsApp code verification and an approval inbox
- Gallery with before-and-after sliders, reviews, enquiry form
- Search-friendly and phone-first

Reports

- Revenue, doctor-wise performance, treatment breakdown
- Pending dues by age, income vs expense, booking conversion

Staff and security

- Unlimited logins with person-by-person permissions
- Instant deactivation and staff profiles
- Encrypted data, separate data per clinic, device verification, daily backups

Part 2: New features to stand out

Dental-specific

1. **Tooth chart:** tap a tooth, mark its condition, and keep history for every visit.
2. **Treatment plan with cost estimate:** the patient sees the full cost and approves it.
3. **Dental lab tracking:** crowns, bridges and dentures sent to a lab, and when they return.

4. **Digital consent signature** on a tablet.

Money

5. **Accounts module:** accounts, entries, day book, profit and loss, GST report, and Export to Tally.
6. **Inventory:** stock, expiry dates and low-stock alerts, linked to purchases and treatments.
7. **Doctor payout:** automatic share for visiting doctors.
8. **Payment link on WhatsApp.**
9. **Insurance and corporate billing.**

Growth

10. **Recall reminders** ("your 6-month cleaning is due").
11. **Birthday wishes and offers.**
12. **Regional language messages.**
13. **Patient portal:** patients see their own history, bills and prescriptions.

Modern

14. **Voice-to-notes:** the doctor speaks and the notes are written.
15. **Multi-branch** under one login.

Added from the competitor research

Items 16 to 29 are new. None of them was in the first list.

Dental and clinical

16. **Multi-sitting treatment tracker:** follow ortho, implant and root canal cases that take 4 to 12 visits.
17. **Imaging integration:** attach images from X-ray sensors, OPG and intraoral cameras to the right tooth and visit.

Money

18. **GST auto-tagging:** mark each procedure as treatment or cosmetic and split the tax correctly. Confirm the rules with a chartered accountant first.
19. **Membership and subscription packages** for cash-pay patients.

20. **EMI and instalment plans** for large treatments.

Reliability and connections

21. **Offline mode:** keep working when the internet drops, then sync later.
22. **Strong mobile app** for staff, usable at the chair.
23. **Open integrations:** payment gateway, accounting and imaging tools. Reviewers of the best-rated Indian product say its connections to other apps are limited.
24. **Easy data export and import,** so clinics can move in and out without extra fees.

Safety and compliance

25. **Consent and data-protection controls:** consent screens, patient data export on request, and India's data protection law.
26. **Activity log:** who changed what, and when.
27. **ABDM (national health ID) support,** optional.

Local and smart

28. **Malayalam and English** screens and patient messages. Check with clinics first, because I found no proof of demand.
29. **No-show prediction,** once there is enough visit data.

Added from the feature deep dive

Items 30 to 48 come from Smart Dental Desk and Cliniify. Many of them are now standard in the market.

Clinical

30. **Pending treatments** from earlier visits surface at the next visit, so nothing is dropped.
31. **Orthodontic and implant tools:** wire and bracket change logs, implant brand and lot tracking, aligner reminders.
32. **Prescriptions and documents in Indian languages,** including Malayalam.
33. **Video consultation links** using the clinic's own Meet or Zoom.
34. **AI help, always reviewed by the doctor:** notes from the consultation, treatment plan drafts, and prescriptions that know the stock.

Money

35. **Staff salary and commission,** calculated on money actually collected.
36. **Lab billing:** one monthly bill per lab vendor.

37. **Multi-session treatment packages.**
38. **Payment on booking links,** so patients can pay when they book.

Front desk and growth

39. **Waiting-room queue display** screen.
40. **Referral tracking:** who sent the patient.
41. **Patient insights:** who is overdue or at risk of dropping off.
42. **Automation rules:** send a message or create a task when something happens.
43. **Google Reviews:** request reviews after a visit, collect private feedback first, and reply from the dashboard.
44. **Own-number WhatsApp account** with a shared two-way inbox for the front desk.
45. **Free find-a-dentist listing** so patients can discover the clinic.

Operations and security

46. **Asset management:** chairs and autoclaves, with warranty and service history.
47. **Two-factor login and network restrictions** for staff.
48. **Google Calendar sync** that does not create duplicate appointments.

The chain that ties it together

Doctor marks a tooth → treatment is added to the bill → accounts entry is made → stock goes down → recall reminder is set.

DentSoft's page shows these as separate pieces, and Smart Dental Desk already links the chart, plan and invoice. The full chain through accounts, stock and recall is still worth showing, but it is not unique on its own.

Suggested order

1. **Launch:** all of Part 1, plus the tooth chart, treatment estimate and accounts module.
2. **Version 2:** inventory, recall reminders, payment links and the consent signature.
3. **Later:** lab tracking, payouts, insurance, multi-branch, voice notes, regional languages, birthday wishes and the patient portal.

What the competitor research changes

- **Add to Launch:** GST auto-tagging (18), data export (24), consent and data-protection controls (25), and the activity log (26). These are cheap to build early and costly to add later.
- **Add to Version 2:** multi-sitting tracker (16), imaging (17), membership packages (19), EMI plans (20), strong mobile app (22), open integrations (23), and Malayalam and English (28, after clinics confirm).
- **Add to Later:** offline mode (21), ABDM support (27), and no-show prediction (29).

This placement is my suggestion. Offline mode may move up if clinics in Kerala lose internet often.

Pricing and onboarding ideas

- Offer a **Free** tier for solo dentists. Smart Dental Desk's free plan allows 1 dentist and 100 patients a year, so clinics will expect one.
- Price against what exists: Smart Dental Desk runs from Rs 3,999 to Rs 11,999 a year, and Simpld starts at Rs 8,100 a year. At Smart Dental Desk, WhatsApp reminders start near Rs 6,000 a year and campaigns near Rs 12,000.
- Keep three paid tiers (Starter, Pro, Enterprise), and set the prices after you talk to clinics.
- Show prices openly, since several competitors hide them.
- Offer free help moving old records and with training. Cliniify promises free migration from Practo, Dental Plus, Softdent and CSV files.
- Use the official WhatsApp Business platform, and show message costs clearly.

Note on the DentSoft comparison

The DentSoft list is based only on their public website page. Features not mentioned there may still exist, so confirm in their free trial.

Items 16 to 29 and the pricing ideas above come from `Dental Software Competitor Research`.

Update from the feature deep dive

The `Competitor Feature Deep Dive` shows that Smart Dental Desk and Cliniify already offer most of Part 2. These changes follow from it.

Now table stakes

Tooth chart, treatment plans, inventory, lab tracking, GST invoicing, memberships, AI notes, prescriptions in local languages, insurance claims, staff payroll, multi-branch, a clinic website, WhatsApp campaigns and a patient portal. DocMatrix needs most of these to be taken seriously, but they will not make it stand out.

Where DocMatrix can stand out

These are hypotheses to test with clinics.

1. **Tally export and a fuller accounts module** (ledgers, balance sheet). I found neither in the leaders.
2. **Malayalam screens for staff,** not only prescriptions.
3. **Offline mode,** if Kerala clinics lose internet often.
4. **Speed and reliability.** BestoSys users complain about freezes and a weak mobile app.
5. **Easy data export.** One BestoSys user feels locked in.
6. **Payment links** on WhatsApp and on the booking page.
7. **Simplicity:** fewer screens for the daily work than products with 70 or more features.
8. **Kerala-based support** and open prices.

Order changes

This overrides the earlier placement where they differ. It is my suggestion.

- **Add to Launch:** basic inventory (item 6: stock in and out, low-stock and expiry alerts), recall reminders (item 10), and pending treatments (item 30). Both leaders already have inventory and recalls.
- **Add to Version 2:** prescriptions in Indian languages (32), staff payroll (35), packages (37), payment on booking links (38), queue display (39), referral tracking (40), automation rules (42), Google Reviews (43), and two-factor login (47).
- **Add to Later:** orthodontic and implant tools (31), video consultation (33), AI help (34), lab billing (36), patient insights (41), own-number WhatsApp inbox (44), find-a-dentist listing (45), asset management (46), and Google Calendar sync (48).

The Excel feature file has not been updated with items 16 to 48.
